

Multi-Agent Intelligence for Service Operations

**Unexpected Incidents Management with
Multi-Agent Collaboration**

Roland Schott, Nils Warnke | Shenzhen | March 17th 2026

Network Experience Improvement with Agentic AI

Use Case Examples:

1. Proven RAN Guardian Agent live in Germany reducing time to manage major events from hours to around a minute – with over 100 remediation actions autonomously triggered in the first month after launch.
2. Ambition for a Service Oriented AI System that predicts, detects, and resolves network issues before customer are impacted.
3. Ambition:
MINDR – Multi-Agentic Intelligent Network Diagnostics & Remediation, a multi-agentic artificial intelligent (AI) system to enable autonomous diagnostics and operations across complex, multi-domain telecommunication networks in partnership with external partners using agent-to-agent protocol.

RAN Guardian Agent: Unexpected Incidents Scenarios and Challenges

Scenarios

Traffic Burst and Performance Degradation caused by Large number of User Access

Marathons

Traffic Jams

Sport Events

Scenario1
Un-planned Events

Typical
Event

Accidents/Traffic Jams/...

Charact
eristics

Unfixed time & location

**Suggest
ion**

Focus on Downlink
throughput optimization

Scenario2
Planned Events

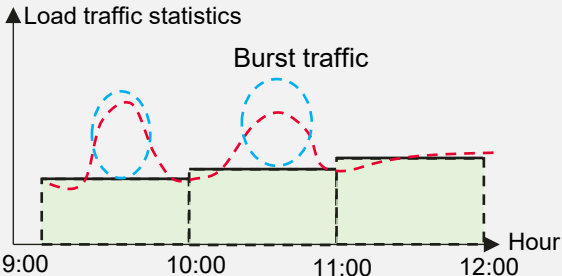

Concerts/Sporting/...

Fixed time & location

Focus on Uplink throughput
optimization

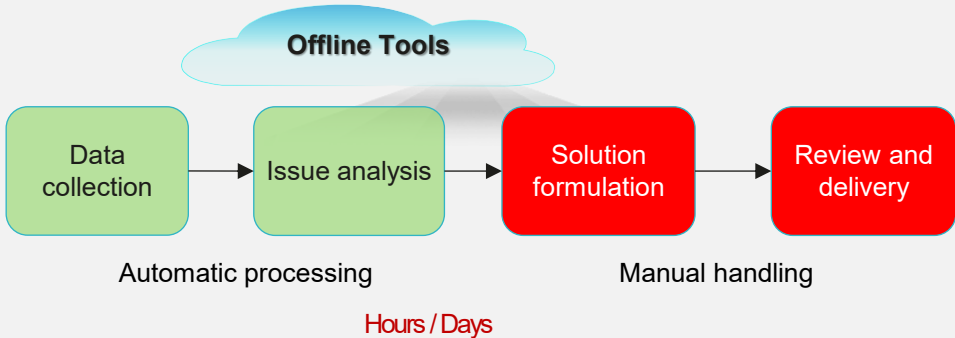

Challenges

Challenge 1: Perception and Prediction of Traffic Burst

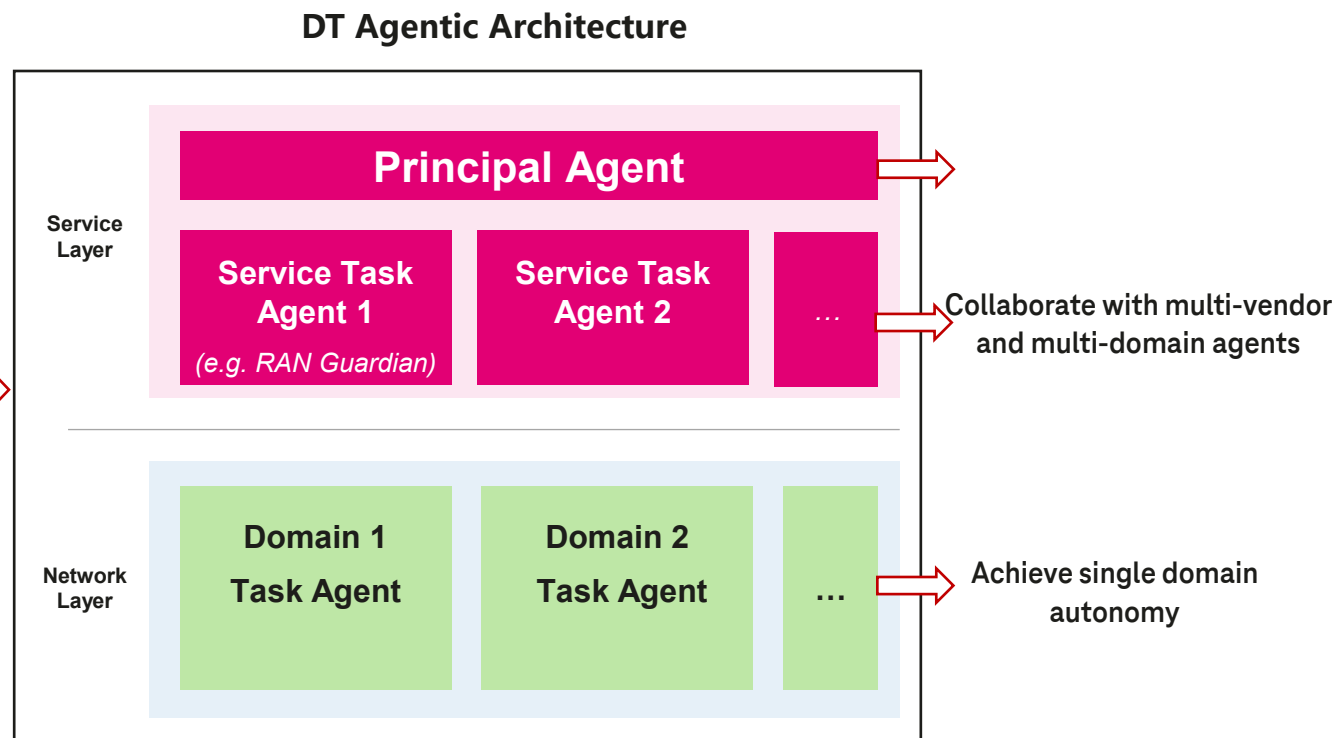

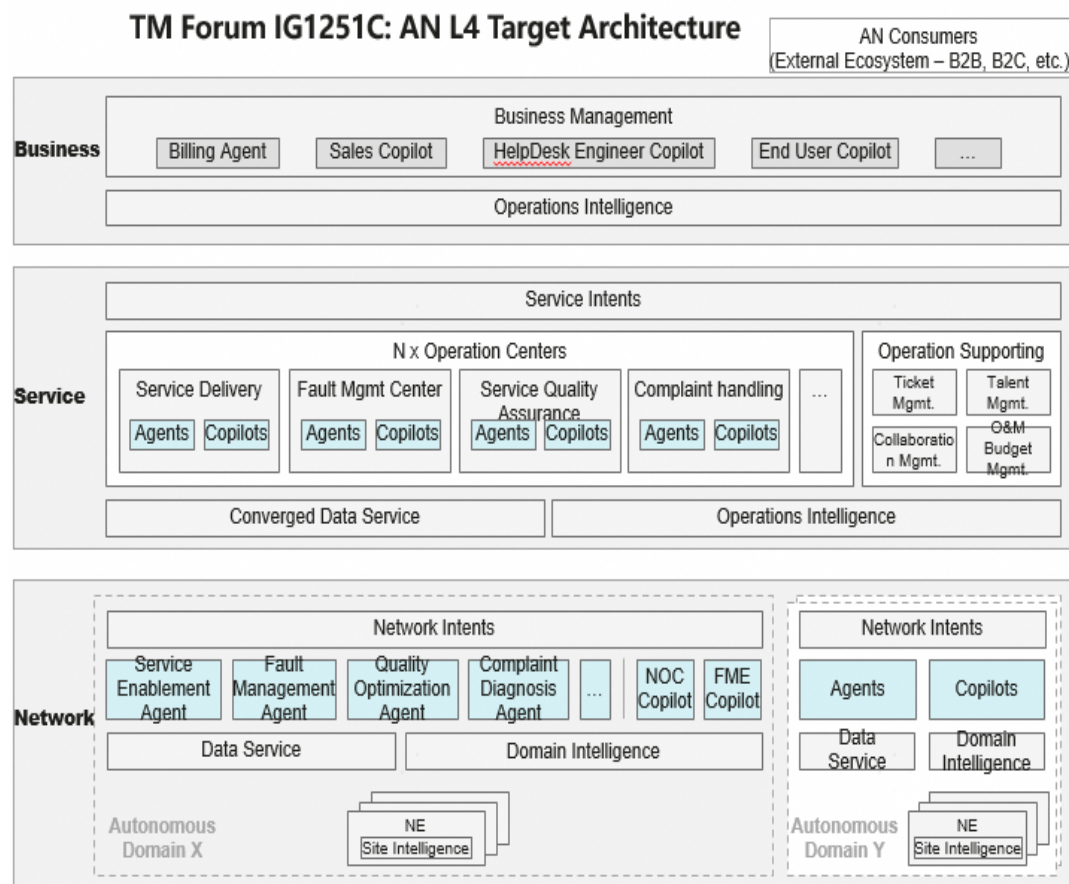

Hour-level traffic monitoring cannot capture the traffic burst occur at minute-level

Challenge 2: Manual Optimization is Low-efficiency for Experience Assurance/Compliant Handling

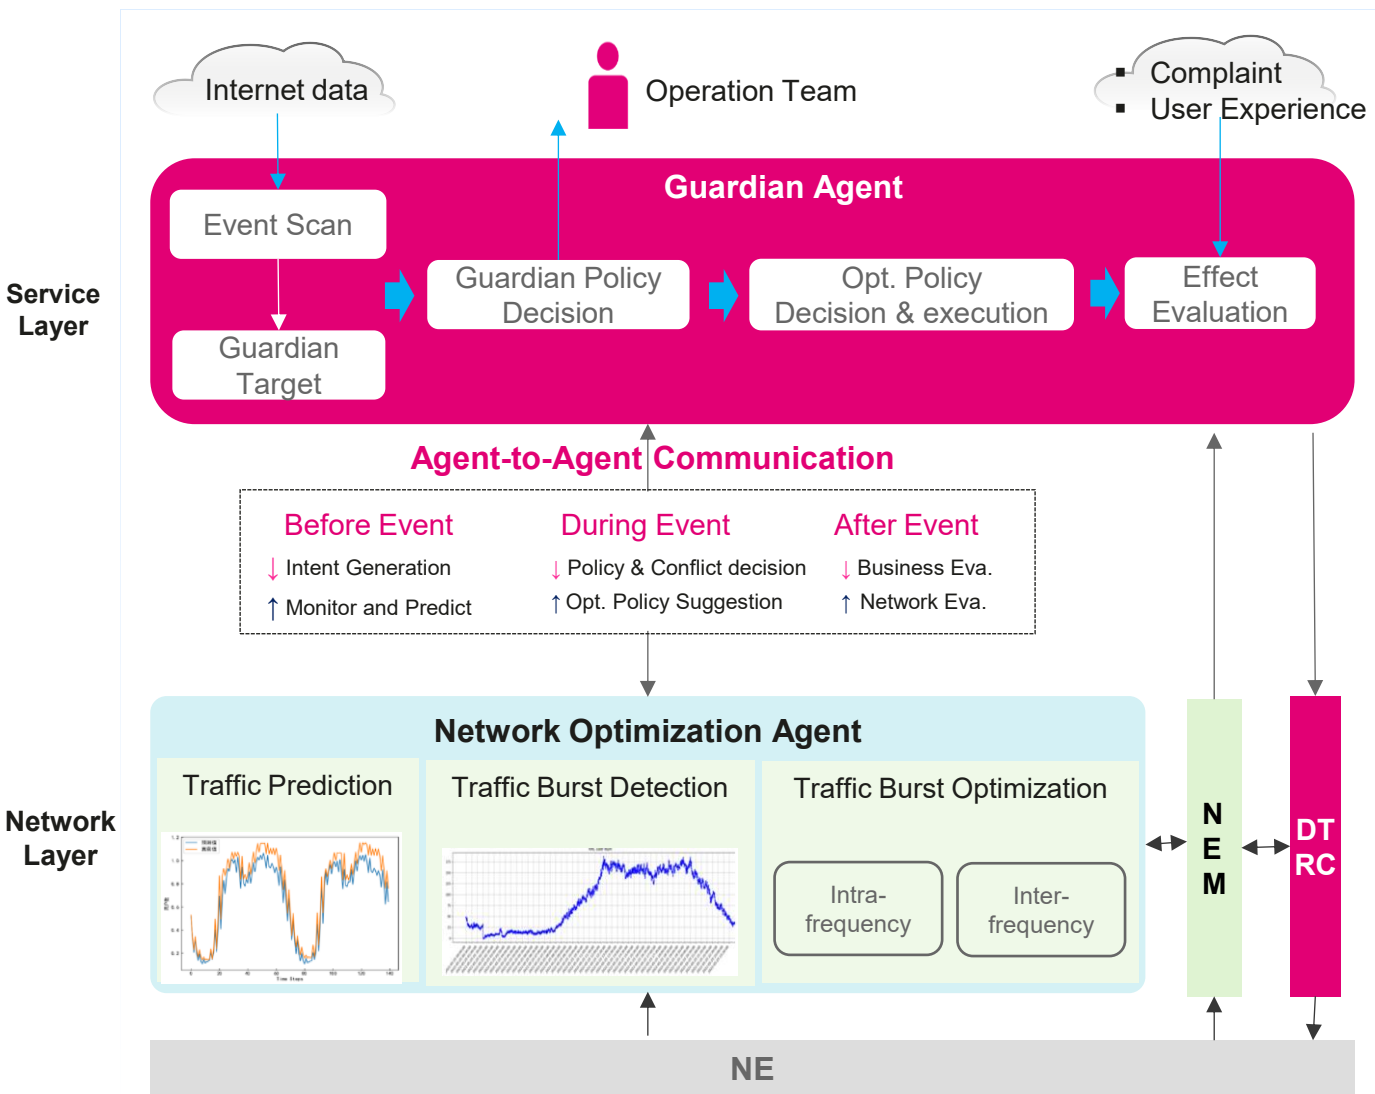

DT Agentic Target Architecture

- Introducing agents at both service layer and network layer:
Multi-vendor and multi-domain autonomy enabled by single domain autonomy

Service Experience Promotion enabled by Collaboration of Multi-layer agents

Scenarios

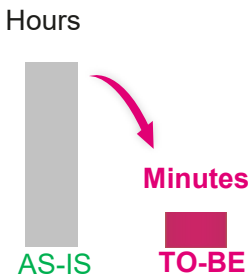

- **Planned Events:** 1500+ Events in Germany per year. for example, Beer Exchange, Concerts, Sports in the venue.
- **Un-planned Events :** traffic-jam, cell out-of-service.
